Expert Witness

Life care plan valuation has relied on esoteric knowledge using outdated technology, resulting in extreme costs and delivery times for far too long. TD&P creates a unique combination of medical and economic expertise and proprietary automation technology to revolutionize the healthcare policy and litigation landscape to produce life care valuation and statistical modeling in minutes. From accurately identifying future medical expenses based on market trends to providing valuable insights into the value of each case, we're revolutionizing how legal actions are addressed today.

TD&P fast-tracks the research process and saves up to

4x the costs

using advanced algorithms and software

to predict care costs with up to

20x more

accuracy compared to conventional methods.

Who TD&P Helps

With medical negligence and personal injury cases on the rise, law firms have increasingly turned to TD&P for help. We specialize in healthcare and economic litigation consulting, leveraging our expertise in medical causation as well as advanced economic theories and principles to provide clients with an accurate assessment of damages associated with such matters. Our clients trust us to deliver quantifiable results.

Evidence-based IMEs, medical damages and pricing analysis for insurance carriers, self-insured corporations and legal counsel.

How TD&P Helps Clients

TD&P provides comprehensive damages modeling and expert testimony services — and we've been experts in this field for over 10 years. With our finger on the pulse of industry expertise and specialized technical proficiency, we have a talented team of experienced senior consultants, academics, and domain specialists to draw from when tackling complex damage projects. Our firm stands out because we can rapidly assemble just the right experts — those with both industry understanding *and* cutting-edge skills — to help us form accurate models as well as critically analyze competing expert research. Our consultants are highly skilled in expertise-backed empirical approaches to accurately calculating losses, perfecting econometric healthcare models, and evaluating the evidence provided by others during disputes.

TD&P's proprietary technology produces fully customized individual ranges for potential care costs in minutes.

What TD&P Provides

From litigation to health care, modern data streams present challenges that require statistical techniques and an innovative combination of traditional methodologies with advanced algorithmic learning. Leveraging our powerful platform and technology, we reveal actionable insights with our data more efficiently than was ever possible before. We successfully optimize the calculation and valuation of medical expenses and our utilization of cutting-edge methodologies and analytics not only informs but also helps predict future medical expenses for personal injury cases — a remarkable feat that has helped clients win in the courtroom.

Valuation

TD&P's core expertise lies in providing clients with the highest caliber of valuation analysis in the litigation setting. With a wealth of technical proficiency and years' worth of practical experience, we can accurately assess all factors that affect value within the healthcare market — no matter how diverse or complex the case may be. From appraising the expense of future medical care for burn victims to assessing the reasonableness of charges for spinal surgeries, this work-tailored has been highly beneficial in litigation.

Statistical Modeling and the Valuation of Future Medical Expenses

TD&P is at the forefront of healthcare litigation and the valuation of future medical expenses, utilizing a team of data science experts to develop sophisticated solutions drawn from an expansive network of complex datasets. By leveraging innovative methods and cutting edge technology, we can extract valuable insights that produce bulletproof results in the courtroom. Drawing from the data landscape, we provide insightful knowledge and patterns that help strengthen cases. Our predictive models are advanced and reliable and offer the opportunity to present research in engaging ways that courts of law can easily comprehend.
